IUAES 2019 Inter-Congress “World Solidarities”

Thursday 29 August 2019

**Infrastructure Building, Mobility, and Solidarity: P 48.1 - Morasko Kampus, room: 3.134
(11:00-12:45)**

Room 3.134 *In the past two decades, both cities and rural areas around the world gained new forms of mobility and complexity in shaping human encounters. One perspective in anthropology is to see cities and developing rural areas as sites for the confluence of infrastructures and cultures. Infrastructures here include not only roads, railways, water pipes, or electric grids, but also media, Internet, and languages that allow for the trafficking of people, goods, ideas, beliefs, and lifestyles. To think of infrastructures relationally requires us to look at the ways in which old and new infrastructures are woven into the everyday workings of a locale, and how they inform the distribution of resources, generate political contestation, and articulate the locality with globalizing forces. Then, what kinds of forces are behind the establishment of these old and new infrastructures? How do infrastructures become landscapes, and how do certain aesthetics mediate this process? How do local, translocal and transnational people perceive, use, react or navigate such revamped ways of connectivity? What kinds of politics, imaginaries, memories and belongings are emerging? How will connections among people generate new forms of solidarities, albeit truncated ones? This panel welcomes papers addressing emerging aspects of urban and rural lives across different sites in the global south, and aims to develop understanding of the relations between infrastructure building, mobility, and solidarities.*

- Conveners: Prof. Daming, Zhou; Prof. Chee-Beng, Tan

time	title	presenter
11:00	Automated vehicle systems and hope for the revitalization of a depopulating area in Japan	YAMAZAKI, Goro
11:20	Impacts of Roads on the Ethnic Dulong Communities in Southwest China and Their Coping and Adopting Strategies	CHEN, Gang
